Conclusion

- Stocks finished mixed as the Iranian conflict flared up once more.
 - The S&P 500 and Nasdaq both showed strength on the week.
 - Small-caps & the Dow Jones Industrial Average declined.
 - Indices have mostly alternated between small moves in both directions for the past 6 weeks as market participants consider AI-related spending, the Middle East conflict, and inflation.
 - The S&P 500 spent early July grinding higher with sector rotation quietly forming beneath a calm index.
 - There has been a clear capital shift between sectors while index-level volatility expectations have remained subdued.
 - In short, individual stocks and sectors moved meaningfully, but those moves largely offset one another at the index level.
 - One byproduct of these unique movements is that positioning for a volatility spike has rarely been cheaper with current demand for downside protection at low levels.
- S&P 500 sub-sectors were mostly higher last week.
 - Healthcare & Financials saw outsized gains to lead to the upside.¹
 - Utilities & Real Estate saw declines last week undoubtedly aided by a rise in interest rates.
- US Treasury yields were higher last week.
 - The yield curve rose across the board sending yields to their highest levels since mid-May amid persistent concerns about inflation and the direction of the Federal Reserve.
- Commodities were higher last week.
 - Oil rose on renewed tensions in the Middle East.¹
 - While this is an input into inflation which is in everyone's crosshairs right now, the actual supply disruption appears to be largely looked through by the markets.
 - Global oil trade flows have shifted notably and perhaps permanently as all eyes watch the oil price signal which remains bearish.
 - Metals were mixed with gold lower and copper higher.¹
 - The US Dollar index gained slightly.¹
- Earnings season is beginning and with attention on results as well as spending.
 - Analysts surveyed by FactSet are forecasting an average 2nd quarter earnings growth rate of 23.6% for companies in the S&P 500, up from a 23.3% forecast a week earlier.
 - They have been aggressively raising their earnings estimates for S&P 500 companies, with firms representing just shy of 64% of the benchmark being revised higher.¹
 - Tech companies are center stage this earnings season as they have been the biggest drivers of market rallies in the US, Taiwan and South Korea.
 - In the US, information technology companies are expected to post 67% profit growth, second-best among S&P 500 sectors after energy at 118%.¹
 - Results from the big spenders on AI infrastructure — Alphabet Inc., Amazon.com Inc., Meta Platforms Inc., Microsoft Corp. and Oracle Corp. — will offer guidance on whether their investments are paying off.
 - This group was among the biggest winners in the AI trade until recently, when investors turned skeptical on how much cash is heading out the door.
